Children's health

Kids will be kids. Their natural carefree way of life - mixing with lots of other children, sharing toys, playing in all weather and conditions - can expose them to all manner of ills and chills.

How can Dinotabs help my child?

The New Image Dinotabs are formulated to contain ingredients that help support healthy immunity, gut health, dental health and normal bone development.

Healthy Immunity & Gut Health

Colostrum supports digestion by providing nutrients that nourish a healthy digestive tract.

Bovine colostrum is a rich, natural source of important immune factors including natural antibodies. These immune factors mean that colostrum may help you and your children cope with the constant pressure placed on our immune system by our modern lifestyles.

Dental & Bone Health

Even though they taste sweet, the New Image Dinotabs do not contain sugar, so they will not contribute to tooth decay. The Dinotabs contain a natural sugar free sweetener called xylitol.

Dinotabs support healthy teeth and gums. Bovine colostrum supports overall oral health and calcium is important for normal healthy teeth and bone mineralisation.

Always read the label and use as directed. If symptoms persist see your healthcare professional.

This product is not suitable for use by children under the age of 12 months, except under advice from a medical practitioner. Potential choking risk.
